

Protocol A (Closed-world)

Input: Zebra image

Local explainable surrogate pixel-level attribution methods

Output: Pixel-level sensitivity.
Limitation: Instance-specific. Opaque semantics. Cannot be reused for the next image. No conflict accounting.

Global explainable rulebook and template matching system

IF [stripes=s2] AND
[hooves=s1] AND
[hunter=s0]
=> ZEBRA

Coverage: 434 instances

Conflict rate: 0%

SYMBOLIC TEMPLATE MATCH:

[ocean=s2] AND [flippers=s2]
AND [quadrappedal=s0]
=> BLUE WHALE

Unseen template acc: 88.51%

Output: Global symbolic logic.
Advantage: Mathematically auditable. Universally reusable across instances. Enables explicit zero-shot structural transfer.

Protocol B (Zero-shot transfer)

Input: Blue whale image
